Experience

EventPin, Inc. 🔗

Sept 2026 – Jan 2027

Software Engineering Co-op (Incoming)

Holland, OH

- Incoming full-time backend co-op on a production event-discovery platform, working on feature development and codebase performance.

AcademicAlly 🔗

July 2024 – August 2025

Developer – ACM Thapar Society

React, Python, Pandas, BeautifulSoup

- Built a responsive timetable portal serving **10,000+** students for instant class schedule lookup across campus.
- Wrote ETL pipelines processing **50,000+** Excel rows with custom error handling, reducing parsing failures by **95%**.
- Supported deployment and maintenance of the **live portal**.

Projects

FocusBoard - Whiteboard Task Capture System 🔗

Kotlin, FastAPI, CRAFT, TrOCR, Phi-3 Mini, TFLite

- Built the Android app in Kotlin with ML Kit document scanning and an experimental on-device **YOLO/TFLite** whiteboard detector chosen for mobile size constraints.
- Engineered a **3-stage OCR pipeline** using CRAFT for line segmentation, TrOCR for transcription, and Phi-3 Mini for structured calendar JSON generation from handwritten input.
- Designed per-device request queues to prevent cross-device race conditions under concurrent load; returns structured JSON for user approval before committing to a shared E Ink display. **In active use.**

Campus-Compute - Distributed Compute Framework 🔗

Python, FastAPI, WebSockets, Docker

- Built a LAN-distributed compute system with a centralized coordinator and worker nodes, with automatic discovery and reconnect handling.
- Designed a capability-aware scheduler using CPU, RAM, and GPU metadata to place tasks across nodes.
- Added a real-time WebSocket dashboard for cluster telemetry, job orchestration, and containerized workload execution; **working prototype**.

folio.mcp - Personal MCP Server 🔗

TypeScript, Cloudflare Workers, Hono, MCP SDK

- Deployed a remote MCP server on Cloudflare Workers exposing **4 tools** covering GitHub activity, portfolio data, and an LLM-invokable contact tool; **live in production**.
- Added a KV layer for GitHub response caching with TTLs and IP-based rate limiting on the contact tool to prevent abuse.
- Shipped a companion frontend at mcp.aneeshgrover.me 🔗 with dynamic tool discovery; automated deploys via GitHub Actions.

Orbital - Cloud IDE Control Plane 🔗

Go, Docker, JWT, REST APIs

- Architected a control plane in Go that provisions isolated VS Code workspaces on demand via a Dockerized provisioner.
- Implemented a reconciler loop to track workspace state and recover from provisioning failures without manual intervention.
- Secured the API surface with JWT-based authentication and a layered internal package structure separating auth, storage, and orchestration concerns; **early-stage prototype**.

Skills

Languages: Python, Go, Java, C++, JavaScript, TypeScript, SQL

Interfaces for Agents: Model Context Protocol (MCP), LLM tool integration, Cloudflare Workers, Hono, REST APIs

Infrastructure for Developers: distributed systems, WebSockets, JWT authentication, system design, Docker, CI/CD, Git

Systems that Learn: PyTorch, TensorFlow, transformers, RAG, vector databases, OpenCV, CUDA

Data & Platforms: Supabase, PostgreSQL, Pandas

Education

University of Toledo

Toledo, OH

Bachelor of Science in Computer Science and Engineering — GPA: 3.4/4.0

Expected May 2028

Leadership & Involvement

Association for Computing Machinery (ACM), Thapar Chapter

Nov 2023 – May 2025

Executive Board Member & Machine Learning Bootcamp Lead

- Organized Hacklipse 2024, ACM Thapar's flagship hackathon, coordinating logistics and operations for **300+** participants.
- Designed and led ACM's Machine Learning Bootcamp curriculum, mentoring **100+** students through weekly technical sessions on ML fundamentals and applications.

Achievements

- Secured **runner-up** in **Open Innovation Category** at **NVIDIA's SatHack**, competing against **1500+** participants.
- Awarded Best Use Case for AcademicAlly at ACM Projectathon 2024.
